

## mSnow™ Summer Tubing Innovations

mSnow has proven itself over time for durability and quality as a synthetic summer tubing surface. Through the use of **Tube Wax™**, mSnow's summer tubing lanes are totally *water-free* and require no irrigation. mSnow **Bumper Tubing™** continues on as the best low-cost summer tubing option for ski areas looking to add summer tubing to their resort.

mSnow continues to research and use the best products available for durable outdoor amusement devices. The following are now standard on every mSnow tubing installation:

- King StarLite® XL panels never need painting and can be easily pressure washed
- Stainless steel mSnow fasteners never rust or corrode
- Durable 18oz PVC-vinyl is highly UV-resistant and is available in many colors
- B-Air blowers are the preferred choice for the leaders in the inflatable industry
- Rainwater drain holes minimize the chances of channelization and erosion

To add to the excitement, the engineers at mSnow have developed and patented a new version of summer tubing that will revolutionize the summer tubing market. **Tube Slide™** is an elevated summer tubing lane that is not only portable, but also can be used to quickly construct exhilarating banked turns and rollers.

Tube Slide incorporates jack screws at every section of track, allowing for quick adjustments during installation. This allows for fine-tuning of corners and results in an extremely smooth ride. This technology allows for quick setup over rough terrain with no excavation.

Tube Slide creates a thrill that is similar to Alpine Slide and Mountain Coaster with the *freedom of rotation* that tubing offers. With Tube Slide, participants experience a different thrill every time they ride.
